

RUGFREECOINS

Human Grok Token

RugfreeCoins Verified on December 1st, 2023

Overview

- ✓ No mint function found, the owner cannot mint tokens after initial deployment.
- ✓ The owner can't change a maximum transaction limit default set to 2% and can not decrease.
- ✓ The owner can't pause trading once it's enabled
- ✓ The owner can't change fees.
- ✓ The owner can't blacklist wallets.
- ✓ The owner can't change max wallet limit default set to 2% and can not decrease.
- ✓ The owner can't claim the contract's balance of its own token.

Disclaimer

This is a limited report on our findings based on our analysis, in accordance with good industry practice as at the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, the details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report. While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – **please make sure to read it in full.**

❗ DISCLAIMER

By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. **This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice.** No one shall have any right to rely on the report or its contents, and **RugfreeCoins and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (RugfreeCoins) owe no duty of care towards you or any other person**, nor does RugfreeCoins make any warranty or representation to any person on the accuracy or completeness of the report.

The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and RugfreeCoins hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, RugfreeCoins hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against RugfreeCoins, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report.

The analysis of the security is purely based on the smart contracts alone. No applications or operations were reviewed for security. No product code has been reviewed.

Background

RugfreeCoins was commissioned by the **Human Grok Token Team** to perform an audit of the smart contract.

<https://etherscan.io/token/0xc86ccb1e873d424866156b1e7284bfc23f9d39b1>

This audit focuses on verifying that the smart contract is secure, resilient, and working according to the specifications.

The information in this report should be used to understand the risk exposure of the smart contract, project feasibility, and long-term sustainability, and as a guide to improving the smart contract's security posture by remediating the identified issues.

Tokenomics

▲ 1% tax when buying

1% of trade goes to the marketing wallet in BNB

▲ 2% tax when selling

2% of trade goes to the marketing wallet in BNB

Target market and the concept

- ▶ Anyone who's interested in the Crypto space with long-term investment plans.
- ▶ Anyone who's ready to earn a passive income by holding tokens.
- ▶ Anyone who's interested in trading tokens.
- ▶ Anyone who's interested in taking part in the Human Grok token ecosystem.
- ▶ Anyone who's interested in taking part in the future plans of Human Grok Token.
- ▶ Anyone who's interested in making financial transactions with any other party using Human Grok Token as the currency.

Potential to grow with score points

 Project efficiency	8 / 10
 Project uniqueness	8 / 10
 Information quality	8 / 10
 Service quality	8 / 10
 System quality	8 / 10
 Impact on the community	8 / 10
 Impact on the business	9 / 10
 Preparing for the future	8 / 10
 Smart contract security	10 / 10

Legend

Symbol	Meaning
	Function can modify state
	Function is payable

Inheritance Hierarchy

Security issue checking status

❖ High severity issues

No high severity issues found

❖ Medium severity issues

No medium severity issues found

❖ Low severity issues

No low-severity issues found

Informational

Pair is creating inside the trade enable function, if anyone created the pair before enabling trading then the owner never calls the openTrading function again.

Resolved: Trade is already enabled.

```
function openTrading() external onlyOwner {
    require(!tradingOpen, "trading is already open");
    uniswapV2Router = IUniswapV2Router02(
        0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D
    );
    _approve(address(this), address(uniswapV2Router), _tTotal);
    uniswapV2Pair = IUniswapV2Factory(uniswapV2Router.factory()).createPair(
        address(this),
        uniswapV2Router.WETH()
    );
    uniswapV2Router.addLiquidityETH{value: address(this).balance}(
        address(this),
        balanceOf(address(this)),
        0,
        0,
        owner(),
        block.timestamp
    );
    IERC20(uniswapV2Pair).approve(address(uniswapV2Router), type(uint).max);
    swapEnabled = true;
    tradingOpen = true;
}
```

Owner privileges

- ❖ Owner can enable trading, once enabled can not disable again

```
function openTrading() external onlyOwner {
    require(!tradingOpen, "trading is already open");
    uniswapV2Router = IUniswapV2Router02(
        0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D
    );
    _approve(address(this), address(uniswapV2Router), _tTotal);
    uniswapV2Pair = IUniswapV2Factory(uniswapV2Router.factory()).createPair(
        address(this),
        uniswapV2Router.WETH()
    );
    uniswapV2Router.addLiquidityETH({value: address(this).balance}{
        address(this),
        balanceOf(address(this)),
        0,
        0,
        owner(),
        block.timestamp
    });
    IERC20(uniswapV2Pair).approve(address(uniswapV2Router), type(uint).max);
    swapEnabled = true;
    tradingOpen = true;
}
```

- ❖ Tax wallet can manually swap and send eth to tax wallet

```
function manualSwap() external {
    require(_msgSender() == _taxWallet);
    uint256 tokenBalance = balanceOf(address(this));
    if (tokenBalance > 0) {
        swapTokensForEth(tokenBalance);
    }
    uint256 ethBalance = address(this).balance;
    if (ethBalance > 0) {
        sendETHToFee(ethBalance);
    }
}
```

- ❖ Owner can remove all limits, once removed can not apply again

```
function removeLimits() external onlyOwner {  
    _maxTxAmount = _tTotal;  
    _maxWalletSize = _tTotal;  
    transferDelayEnabled = false;  
    emit MaxTxAmountUpdated(_tTotal);  
}
```

Audit conclusion

RugFreeCoins team has performed in-depth testing, line-by-line manual code review, and automated audit of the smart contract. The smart contract was analyzed mainly for common smart contract vulnerabilities, exploits, manipulations, and hacks. According to the smart contract audit.

Smart contract functional Status:	PASS ▾
Smart contract security Status:	PASS ▾
Number of risk issues:	NONE ▾
Solidity code functional issue level:	PASS ▾
Number of owner privileges:	3
Centralization risk correlated to the active owner:	NONE ▾
Smart contract active ownership:	ACTIVE ▾
