Disclaimer

This is a limited report on our findings based on our analysis, in accordance with good industry practice as at the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, the details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report. While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – please make sure to read it in full.

DISCLAIMER: By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice. No one shall have any right to rely on the report or its contents, and Rugfreecoins and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (Rugfreecoins) owe no duty of care towards you or any other person, nor does Rugfreecoins make any warranty or representation to any person on the accuracy or completeness of the report. The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and Rugfreecoins hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, Rugfreecoins hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against Rugfreecoins, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report. The analysis of the security is purely based on the smart contracts alone. No applications or operations were reviewed for security. No product code has been reviewed.

Background

Rugfreecoins was commissioned by Predator Token to perform an audit of the smart contract.

<https://bscscan.com/token/0xe59046e1a4a83c11ccc578e26da4eeec8484ed8d>

The focus of this audit is to verify that the smart contract is secure, resilient and working according to the specifications.

The information in this report should be used to understand the risk exposure of the smart contract, project feasibility, long term sustainability and as a guide to improve the security posture of the smart contract by remediating the issues that were identified.

About the project

Predator is a token built on the Binance Smart Chain. Each transaction, purchase incur a 15% fee, and sales incur an 13% fee. The Predator Token launched on 6th August 2021 on PancakeSwap.

The token aims to become the next big thing in the crypto world with its predatory approach. Offering a range of investment opportunities and services that could attract thousands of new traders to the ecosystem, Predator is accessible across multiple markets. Predator is confident in its superior tokenomics, as it focuses on extreme sports, and will become the industry's cryptocurrency leader.

Features

- ❖ 10% of each transaction when buying and 13% when selling gets converted to BUSD and is split amongst all holders. The holders will be eligible to receive tokens everyone hour and rewards are proportional to how many tokens each individual holds.
- ❖ The **sustainability fee of 3% marketing fee when buying and 4.5% when selling** is what allows Predator to hold the aforementioned promise. Tokens will be swapped into BNBs and will be sent to a marketing wallet per transaction. This way, Predator will have enough funds to promote the coin and spend for future development without selling tokens as the traditional way.
- ❖ **1.5% fee** from buying and selling is allocated to buyback tokens to save from massive dips in order to keep the token market price stable.
- ❖ **0.5% Charity fee** per transaction is allocated for charity. This will empower the Predator community in the long run and motivate more people to join in!

Tokenomics

15% fee when buying

- 10% of trade goes to holders pockets in BUSD.

5% to a private wallet

- 3% of trade will be allocated for marketing.
- 1.5% of trade will be allocated to buyback tokens.
- 0.5% of trade will be allocated for charity.

19.5% fee when selling

- 13% of trade goes to holders pockets in BUSD.

6.5% to a private wallet

- 4.5% of trade will be allocated for marketing.
- 1.5% of trade will be allocated for buyback tokens.
- 0.5% of trade will be allocated for charity.

Team

The team is presented on a dark background with a repeating 'PREDATOR' watermark. Each member has a circular profile picture and their name in all caps. Below the name are their roles. The members are arranged in two rows: four in the top row and three in the bottom row.

Roadmap

August 2021

Presale and PancakeSwap Launch
Contract Audit
Global Marketing Launch

Q3 2021

CoinGecko Listing
CoinMarketCap Listing
PredFit Launch
Fitness Partnerships Start
Charity Partnerships Start
UniSwap Bridge and Listing
PredNFT Launch
Exchange Listing #1
Exchange Listing #2
Blockfolio, Delta, Stocktwits Listing

Q4 2021

PredatorTV Launch
NFT Tickets Launch
Exchange Listings #3 and #4
Tier-1 Exchange Listing

2022

Anonymous Payment Launch
Cross-Chain Migration

Target market and the concept

Target market

- ❖ Anyone who's interested in Crypto space with long term investment plans.
- ❖ Anyone who's ready to earn a passive income in BNB by holding tokens.
- ❖ Anyone who's interested in trading tokens.
- ❖ All BNB investors and fans out there.
- ❖ Anyone who's interested in taking part with the games, NFT marketplace and NFT ticketing system that's going to be built by the Predator team.
- ❖ Anyone who's interested in taking part with Predator TV and other future plans.
- ❖ Anyone who's interested in making financial transactions with any other party using Predator token as the currency.

Core concept

The BUSD reward system

10% of each transaction when buying and 13% when selling gets converted to BUSD and is split amongst all holders. The rewards are sent to holders that have at least 1 Predator tokens, holders will be eligible to receive tokens everyone hour and rewards are proportional to how many tokens each individual holds.

Sustainable mechanism

The marketing fee of 3% when buying and 4.5% when selling is what allows Predator token to promote the token and use funds to further development of the platform. Tokens will be swapped into BNB and will be sent to a marketing wallet per transaction. This way, Predator token will have access to the funds without selling tokens as the traditional way, which will enable them to consume funds without hurting the project.

The controlled buyback collects 1.5% tax on each transaction, which is stored inside a private wallet. It is to save from massive dips in order to keep the token market price stable.

Good cause

0.5% Charity fee will be used for selective charity causes.

Decorative separator line with a central geometric pattern.

Save The Wolves	TBA	TBA
Our August Charity	Our September Charity	Our October Charity

About Charity!

WOLF
CONSERVATION CENTER
www.nywolf.org

States have made clear their intentions to drive down
wolf populations to the bare minimum, ignoring science, ethics, and even tribal rights.

Wolves need continued federal protection to survive and recover.

Donated so far: \$\$\$\$

Whale Protection

- ❖ Sell regulation: 90 sec buy and sell delay to stop bots.
- ❖ Max transaction amount of 0.5% of the total supply.

The future plan

The predator will launch its own gym-wear and fitness clothing collections, introduce crypto pay-TV, and set up an NFT marketplace and an NFT ticketing system for sports events.

PredNFT

PredNFT comprises two main projects:

NFT Collectibles

Users will be able to collect NFTs representing their favourite athletes and moments from selected sports.

We will then establish a platform where users can buy, sell, and trade their NFTs. Profits can be made by users, since athletes at the height of their careers will be in higher demand, and iconic moments will be more valuable.

Fees from this platform will be used to further the development of the project.

NFT Tickets

Since we are targeting extreme sports, we think a natural step is to help those sports grow. Therefore, Pred will be launching an NFT ticketing system to selected sports and events, allowing a wider audience to participate, as well as facilitating the ownership tracking to help fight ticket scalping.

Tickets will also come with unique perks which will be elaborated on at a later date.

PredTV

Many of our users will be sports fans...

So a natural step is to expand the Pred ecosystem to create a platform for our user to enjoy their favourite sports, with exclusive rewards.

PredTV will go hand-in-and with the PredNFT project and will bring further adoption and marketing opportunities to the Predator project.

The launch of PredTV will be a significant milestone in the Predator project, and as such will also present a unique challenge.

At first, the sports and events available will be limited to a smaller selection, but this will expand with time.

We are excited to reveal more as time goes on.

Private Payment System

The technological themes of this decade are decentralisation and privacy.

Never before has it been so important to own and protect your data – both from hostile entities, and legal ones.

We believe that people should own their own data, and should have the right to financial privacy.

That is why, in 2022, we will begin developing and testing a private payment system based on the Predator ecosystem. Users will be able to confidently manage their assets without the fear of third-parties gaining access to their private data.

We will consult with cryptography and data security experts to ensure that we develop a robust, secure, and easy-to-use payment system which puts (and keeps) the user in control.

More information will be given as the project progresses.

Potential to grow with score points

1.	Project efficiency	9/10
2.	Project uniqueness	8/10
3	Information quality	8/10
4	Service quality	8/10
5	System quality	8/10
6	Impact on the community	8/10
7	Impact on the business	8/10
8	Preparing for the future	8/10
Total Points		8.13/10

Token distribution

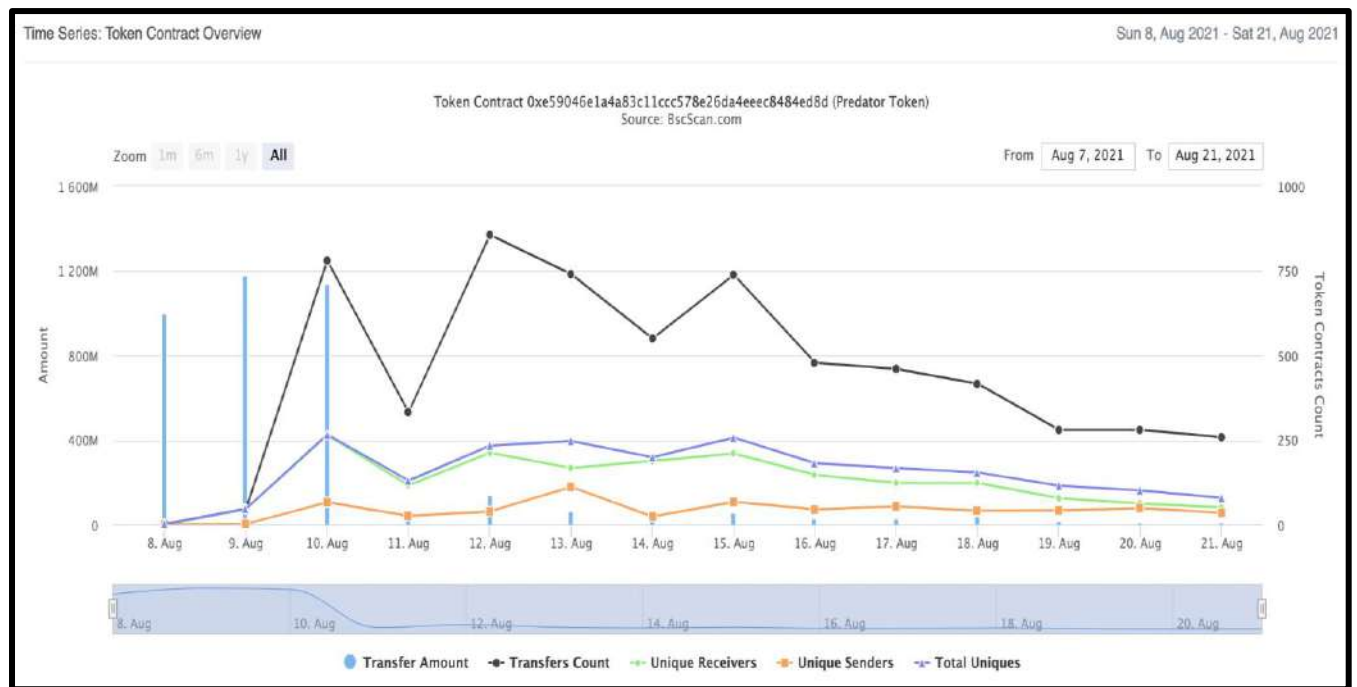

Tokens are distributed as follows:

- ❖ 15% Private sale for early investors and partners that funded the project
- ❖ 17.8% Burn wallet (locked and will be burned gradually)
- ❖ 5% Marketing and development wallet
- ❖ 62.2% public funds (DxSale) split into:
 - ❖ 30% Presale (Whitelist)
 - ❖ 25% Public sale (PancakeSwap)
 - ❖ 7.2% Dxsale burn

Legend

Symbol	Meaning
	Function can modify state
	Function is payable

Inheritance Hierarchy

Security issue checking status

❖ High severity issues

- No high severity issues found.

❖ Medium severity issues

- The owner can enable and disable trading at any time.

```
fttrace | funcSig
function setTradingIsEnabled(bool _enabled) public onlyOwner {
    tradingIsEnabled = _enabled;
    emit SwapAndLiquifyEnabledUpdated(_enabled);
}
```

Suggestion:

Function should change for the owner to only enable the trading not to disable.

❖ Low severity issues

- Misleading variable (buyBackWallet)

```
//
swapTokensForBNB(swapTokens);
transferToBuyBackWallet(
    payable(buyBackWallet),
    address(this).balance.div(10**2).mul(marketingDivisor)
);
```

Using the variable name as buyBackWallet for the marketing wallet, it should be renamed as marketing wallet or a similar one.

- Liquidity is not getting added to the liquidity pool against all the trades, which might be a reason to lead to a market and token price imbalance. Owners can manually add liquidity from time to time but, still not a good feasible solution.
- Out of gas issue

```
ftrace | funcSig
function excludeMultipleAccountsFromFees(
    address[] calldata accounts↑,
    bool excluded↑
) public onlyOwner {
    for (uint256 i = 0; i < accounts↑.length; i++) {
        _isExcludedFromFees[accounts↑[i]] = excluded↑;
    }

    emit ExcludeMultipleAccountsFromFees(accounts↑, excluded↑);
}
```

In the excludeMultipleAccountsFromFees function, if they use a long wallet list there can be an OUT_OF_GAS issue, better to use a small array list at once.

Owner privileges

- ❖ The owner can change the max buying and selling amount.

```
ftrace | funcSig
function setMaxBuyTransaction(uint256 maxTxn↑) external onlyOwner {
    maxBuyTransactionAmount = maxTxn↑ * (10**9);
}

ftrace | funcSig
function setMaxSellTransaction(uint256 maxTxn↑) external onlyOwner {
    maxSellTransactionAmount = maxTxn↑ * (10**9);
}
```

- ❖ The owner can change the max wallet hold amount.

```
ftrace | funcSig
function setMaxWalletToken(uint256 maxToken↑) external onlyOwner {
    maxWalletToken = maxToken↑ * (10**9);
}
```

- ❖ The owner can change the sell fee up to 2X.

```
ftrace | funcSig
function setSellTransactionMultiplier(uint256 multiplier↑)
    external
    onlyOwner
{
    require(
        sellFeeIncreaseFactor >= 100 && sellFeeIncreaseFactor <= 200,
        "PredatorToken: Sell transaction multiplier must be between 100 (1x) and 200 (2x)"
    );
    sellFeeIncreaseFactor = multiplier↑;
}
```

- ❖ The owner can change marketing divisor up to 100%.

```
ftrace | funcSig
function setMarketingDivisor(uint256 divisor↑) external onlyOwner {
    require(
        marketingDivisor >= 0 && marketingDivisor <= 100,
        "PredatorToken: Marketing divisor must be between 0 (0%) and 100 (100%)"
    );
    sellFeeIncreaseFactor = divisor↑;
}
```

- ❖ The owner can enable/disable trading.

```
ftrace | funcSig
function setTradingIsEnabled(bool _enabled↑) public onlyOwner {
    tradingIsEnabled = _enabled↑;
    emit SwapAndLiquifyEnabledUpdated(_enabled↑);
}
```

- ❖ The owner can enable/disable buy back.

```
ftrace | funcSig
function setBuyBackEnabled(bool _enabled↑) public onlyOwner {
    buyBackEnabled = _enabled↑;
    emit BuyBackEnabledUpdated(_enabled↑);
}
```

- ❖ The owner can manually run the buy back.

```
ftrace | funcSig
function triggerBuyBack(uint256 amount↑) public onlyOwner {
    require(
        !swapping,
        "PredatorToken: A swapping process is currently running, wait till that is complete"
    );

    uint256 buyBackBalance = address(this).balance;
    swapBNBForTokens(buyBackBalance.div(10**2).mul(amount↑));
}
```

- ❖ The owner can update the dividend coin.

```
ftrace | funcSig
function updateDividendTracker(address newAddress↑) public onlyOwner {
    require(
        newAddress↑ != address(dividendTracker),
        "PredatorToken: The dividend tracker already has that address"
    );

    PredatorTokenDividendTracker newDividendTracker = PredatorTokenDividendTracker(
        payable(newAddress↑)
    );

    require(
        newDividendTracker.owner() == address(this),
        "PredatorToken: The new dividend tracker must be owned by the FLOKIBUSD token contract"
    );

    newDividendTracker.excludeFromDividends(address(newDividendTracker));
    newDividendTracker.excludeFromDividends(address(this));
    newDividendTracker.excludeFromDividends(address(uniswapV2Router));

    emit UpdateDividendTracker(newAddress↑, address(dividendTracker));

    dividendTracker = newDividendTracker;
}
```

- ❖ The owner can update reward fee and marketing fee up to 10%.

```
ftrace | funcSig
function updateDividendRewardFee(uint8 newFee↑) public onlyOwner {
    require(
        newFee↑ >= 0 && newFee↑ <= 10,
        "PredatorToken: Dividend reward tax must be between 0 and 10"
    );
    dividendRewardsFee = newFee↑;
}

ftrace | funcSig
function updateMarketingFee(uint8 newFee↑) public onlyOwner {
    require(
        newFee↑ >= 0 && newFee↑ <= 10,
        "PredatorToken: Dividend reward tax must be between 0 and 10"
    );
    marketingFee = newFee↑;
}
```

- ❖ The owner can change v2 router address.

```
ftrace | funcSig
function updateUniswapV2Router(address newAddress↑) public onlyOwner {
    require(
        newAddress↑ != address(uniswapV2Router),
        "PredatorToken: The router already has that address"
    );
    emit UpdateUniswapV2Router(newAddress↑, address(uniswapV2Router));
    uniswapV2Router = IUniswapV2Router02(newAddress↑);
}
```

- ❖ The owner can exclude accounts from the fee.

```
ftrace | funcSig
function excludeFromFees(address account↑, bool excluded↑) public onlyOwner {
    require(
        _isExcludedFromFees[account↑] != excluded↑,
        "PredatorToken: Account is already the value of 'excluded'"
    );
    _isExcludedFromFees[account↑] = excluded↑;

    emit ExcludeFromFees(account↑, excluded↑);
}

ftrace | funcSig
function excludeMultipleAccountsFromFees(
    address[] calldata accounts↑,
    bool excluded↑
) public onlyOwner {
    for (uint256 i = 0; i < accounts↑.length; i++) {
        _isExcludedFromFees[accounts↑[i]] = excluded↑;
    }

    emit ExcludeMultipleAccountsFromFees(accounts↑, excluded↑);
}
```

- ❖ The owner can change the buy back wallet.

```
ftrace | funcSig
function updateBuyBackWallet(address newBuyBackWallet↑) public onlyOwner {
    require(
        newBuyBackWallet↑ != buyBackWallet,
        "PredatorToken: The liquidity wallet is already this address"
    );
    excludeFromFees(newBuyBackWallet↑, true);
    buyBackWallet = newBuyBackWallet↑;
    emit BuyBackWalletUpdated(newBuyBackWallet↑, buyBackWallet);
}
```

- ❖ The owner can change the claim wait.

```
ftrace | funcSig
function updateClaimWait(uint256 claimWait↑) external onlyOwner {
    dividendTracker.updateClaimWait(claimWait↑);
}
```

Audit conclusion

While conducting the audit of the Predator token smart contract, it was observed that there is nothing alarming with the code and the contract contains only medium and low severity issues.
